Love how you work.®

Problem

Increasing workplace density is influencing office design principles. Bench-style workstation layouts are gaining in popularity. But there's a problem: a bench simply doesn't meet every requirement – particularly the need for privacy. Many organizations require a combination of open benches and system workstations to increase privacy and utility as needed.

Insight 1

People want privacy when they need it

People want privacy when they need to do focused work – to really concentrate – but visual contact with their workspace colleagues when they are not.

Insight 2

People want their personal objects close by

People want to keep their personal objects close by them. From the MP3 players that keep us company on the subway to the gloves that warm our hands, a workspace should offer us what we need to manage these objects.

Insight 3

People like to personalize

People feel good when they can personalize their workplace. A workspace should therefore allow different types of users to personalize their work tools and work environment to suit their job duties and reflect their identity.

Lexicon total workspace system

Today's workers have high expectations of what a workspace should provide. They want privacy and eye contact - but only when they choose. They want a clutter-free working area, on the desk surface and underneath. They want cables, connectors and power sockets to be hidden out of sight yet easy to use. They want space for their own office items and to keep their personal property close at hand. In other words functional performance and personal customization in one system. Total support for their way of working.

Why Lexicon?

- 1 - Easy integration of technology
- 2 - Flexible support for individual and collaborative work
- 3 - Supports personalization of individual workspace

Marker board screen

Helping workers to manage their own items helps keeps things tidy.

Handy shelf provides additional space.

If cable management is too complex, people won't use it.

Ingenious design supports the nomadic worker.

Name tag holder helps identify your space as your own.

Lexicon's simple three-step installation design reduces time-related costs during installation and ensures maximum ease of reconfiguration and relocation in the future. Components simply slip-fit together, minimizing support components and providing clean access throughout the underside of desk. Making life even easier.

Lexicon is simple versatility brought to life. The available high panels, solid partitions and modular work surfaces and corner sections form the basis of a totally flexible workspace solution. One that covers every need, from bench-style meeting table to truly personal cubicle.
